Precision Prompting Challenge

Name: Munira Alinur Sheikh

Course: AI Strategy (Online Course)

Date: May 2026

Introduction

Precision in maternal health AI is essential because generic advice can be unsafe or impractical. In rural Kenya and Uganda, over 70% of expectant mothers live more than 5 km from clinics and rely on local foods like ugali and matooke. AI must reflect these realities to provide useful, trusted, and life-saving guidance.

Prompt A: Nutrition Advice

AIM Framework

A: Pregnant women in rural Kenya/Uganda with limited income.

I: Provide culturally relevant nutrition advice.

M: SMS format, simple English, 3–4 messages.

MAP Framework

M: Include local foods (ugali, matooke, beans, sukuma wiki, omena).

A: Limited access to supermarkets, reliance on local markets.

P: Affordable, actionable, include hydration.

Final Prompt: Provide nutrition advice for a pregnant woman in rural Kenya or Uganda using affordable local foods. Respond in 3–4 SMS messages, simple English, include hydration, avoid expensive foods.

Improvement: Enhances cultural relevance and usability.

Prompt B: Appointment Reminders

AIM Framework

A: Pregnant women living far from clinics.

I: Remind about antenatal visits.

M: SMS format.

MAP Framework

M: Include travel planning and CHW support.

A: Limited transport, clinic schedules vary.

P: Under 160 characters, one action.

Final Prompt: Create an SMS reminder considering travel distance, clinic schedules, and CHW support. Keep it simple and under 160 characters.

Improvement: Improves attendance by addressing real barriers.

Prompt C: Emergency Triage

AIM Framework

A: Pregnant women in rural areas.

I: Provide safe guidance when unwell.

M: Calm SMS steps.

MAP Framework

M: Identify danger signs.

A: Limited hospital access.

P: No diagnosis, escalate if needed.

Final Prompt: Provide calm step-by-step SMS guidance. Check danger signs first. If present, advise urgent care. If not, give safe next steps.

Improvement: Reduces risk through verification.

Reflection

This assignment showed that AI must adapt to real-world conditions to be effective in healthcare. Precision prompting ensures outputs are relevant, safe, and actionable. By incorporating cultural, economic, and logistical realities, AI becomes a reliable support system rather than a generic advisor. This is especially important in maternal health where timely and accurate guidance can directly impact lives.
